Information about Moskalti Capital

Moskalti Capital is a Sofom (Multiple Purpose Financial Company) that has been operating in the market for almost three years.

Our main focus is SMEs (Small and Medium Enterprises), currently targeting exclusively corporate entities.

Financial Conditions offered to clients:

- **Product:** Simple loan with pledge or mortgage guarantee.
- **Collateral (Coverage (The value of the guarantee offered by the client must be equivalent to two times the loan amount requested)):** 2 to 1.
- **Maximum loan amount:** \$5,000,000 MXN
- **Maximum term:** 6 to 24 months
- **Opening commission:** 2%
- **Interest rates:** Between 19% and 30% annually, with an approximate average of 26% annually
- **Sector:** All sectors accepted, except agriculture
- **Coverage:** Nationwide
- **Minimum operating history:** One year

How we conduct our analysis

We use an internally designed Excel template, into which we input the financial statements provided by clients or brokers. The file is organized into sections:

1. First sheet: Balance Sheet:

- In the Concept column, there are accounts that cannot be modified, as the formulas in the RF (Financial Ratios) sheet are directly linked to this section.
- For clarity, these fixed accounts are marked in light blue.
- Other accounts can be adjusted or modified according to each client.

Example 1:

CONCEPTO
Activo
Activo circulante:
Efectivo, equivalentes de efectivo y efectivo restringido
Cientes
Inventario
Deudores Diversos
Impuestos a Favor
Funcionarios
Iva acreditable
Impuestos por acreditar
Anticipo de proveedores

Example 2:

CONCEPTO
Activo
Activo circulante:
Efectivo, equivalentes de efectivo y efectivo restringido
Cientes
Inventario
Proyectos en proceso
Partes relacionadas
Impuestos al valor agregado
Pagos anticipados
Impuestos por acreditar
Otras cuentas por cobrar

- Next to the Balance Sheet, there is a comparison table showing variations between fiscal years:
 - Identifies accounts that remain unchanged year after year.
 - Calculates percentage variation (higher, lower, or equal compared to the previous period).
 - Accounts with no variation are considered **alerts** and require deeper analysis.

Example:

CONCEPTO	2023	2024	abr-25	% 23-24	%24-25
Pasivo					
Préstamos de instituciones financieras					
Proveedores		208,259	208,259	#DIV/0!	0.00%
Acreedores Diversos	15,566			-100.00%	
Anticipo de Cientes					
Iva Traslado	23,797				
Iva por Traslado	39,900	185,862	185,862	365.82%	0.00%
PTU por Pagar					
Otros pasivos a corto plazo					
Total del pasivo circulante	79,263	394,121	394,121	397.23%	0.00%

2. Second sheet: Income Statement:

- This sheet only contains the client's financial information, exactly as presented in their statements. Its purpose is to feed formulas in subsequent sheets and to identify year-to-year variations.

3. Third sheet: Financial Ratios:

- Contains the formulas we use for analysis. Structure includes:
 - Year-by-year results with automatically calculated indicators.
 - Annual comparison table showing variations between periods.
 - Objective: detect variations, quantify them, and evaluate trends or alerts, Formulas used:

Solvency and Viability:

- Total Assets
- Total Debt / Total Assets
- Leverage
- Fixed Assets / Total Assets

Cycle:

- Accounts Receivable Turnover (days)
- Inventory Turnover
- Accounts Payable Turnover

Profitability and Liquidity:

- Current Assets / Short-Term Liabilities
- Sales / Total Assets
- Annual Sales
- Net Income
- Financial Cycle
- Net Margin
- UAFIR Margin
- ROA
- ROE

Additional Indicators:

- In addition to the financial ratios, we apply additional indicators with the objective of determining whether the company's profit margin will allow it to cover the requested credit.
 - Coverage Criterion (2:1): Net income must be at least twice the loan amount requested.
 - Example: If net income is \$1,250,000 and the loan requested is \$3,000,000 for 12 months, we evaluate if sufficient capacity exists.

- Methodology:
 - Average net income of the last 3 years.
 - Divide by loan amount requested to obtain coverage indicator.
- Credits with a term longer than 12 months: In these cases, the net income of the last three full years is considered, or alternatively, two full years plus the current year, in order to obtain a broader view of the company's ability to meet the requested repayment term.

Indicators include:

- Net Margin / Loan
- Annual Loan
- 3-year average
- 2-year average

4. **Fourth sheet: Credit Model:**

- This sheet consolidates the most important aspects of the analysis, as it is used to obtain the final credit rating. It is directly linked to Sheet 3 (Financial Ratios) and is structured into three main tables:
- Table 1: Credit and Management History (40%)
 - It is based on the information obtained from the Credit Bureau.
 - It evaluates the company's historical credit behavior and administrative management.
- Table 2: Solvency and Viability (30%)
 - It analyzes the company's ability to meet its financial obligations.
 - It focuses on the stability and sustainability of the business.
- Table 3: Profitability, Liquidity, and Momentum (30%)
 - It evaluates profit margins, available liquidity, and growth trends.
 - It helps identify whether the company has favorable conditions to assume the requested credit.
- Cada indicador dentro de estas tablas está formulado en función de los resultados obtenidos en las Razones Financieras, lo que asegura coherencia y objetividad en la calificación final.
- Each indicator within these tables is formulated based on the results obtained from the Financial Ratios, ensuring consistency and objectivity in the final credit rating.
- At the end of the credit model tables, an overall score is obtained, for example: 73.84 out of 100, which corresponds to a Category C within our rating scale.

- This rating is determined based on the three blocks of the model (Credit History, Solvency, and Profitability), weighted according to their specific importance. The rating scale we use is as follows:

Category	Score	General Interpretation
A	90–100	Excellent credit profile
B	80–89	Solid profile, low risk
C	70–79	Acceptable profile, areas to review
D	60–69	Weak profile, requires adjustments
E	50–59	Not viable for credit

- In this case, our rating is C, which indicates that the profile is acceptable; however, there are elements that must be reviewed in greater detail before moving forward.

5. Fifth Sheet: Indicative Rates (Credit and Collateral Matrix)

- This sheet contains an example of indicative rates (% annual), which we use as a reference to define the applicable rate for each client.
 - Rates are updated daily based on the 28-day TIIE (Interbank Equilibrium Interest Rate)."
 - However, the final rate does not depend solely on the TIIE, but also on the type of collateral that the client is willing to provide as support for the credit.
- This model allows us to adjust the rate dynamically, taking into account both the financial environment and the applicant's risk profile.

Rango Tasas Indicativas (% Anual)

729	1		2		3		4		5	
	Bajo	Alto	Bajo	Alto	Bajo	Alto	Bajo	Alto	Bajo	Alto
A	17.2886	19.2786	19.2886	23.2786	23.2886	29.2786	29.2886	37.2786	37.2886	39.7786
B	19.7886	21.7786	21.7886	25.7786	25.7886	31.7786	31.7886	39.7786	39.7886	44.7786
C	24.7886	26.7786	26.7886	30.7786	30.7886	36.7786	36.7886	44.7786	44.7886	52.2786
D	32.2886	34.2786	34.2886	38.2786	38.2886	44.2786	44.2886	52.2786	52.2886	62.2786
E	42.2886	44.2786	44.2886	48.2786	48.2886	54.2786	54.2886	62.2786	62.2886	66.57

AI Agent

In conclusion, the objective of developing an artificial intelligence agent is to optimize timelines and improve the quality of our results. Once our current analysis process is fully understood, we want the AI agent to be able to automate most of this workflow.

Currently, the SWOT analysis, the executive report, and the dashboard are prepared manually, and we would like the AI agent to be able to generate these elements automatically as well.

For this reason, we have defined the following key functions that the AI agent must perform:

- From an Excel spreadsheet or predefined template, upload the company's financial statements and generate the following outputs:
- Financial and credit analysis
- Calculation of financial ratios
- Risk assessment and evaluation of payment capacity
- Generation of a dashboard and executive report
- Issuance of a credit recommendation based on the analyzed information (*Approve / Approve with Conditions / Reject*)
- SWOT Analysis (Strengths, Weaknesses, Opportunities, Threats)

Example of how it can be displayed:
